

# Clinical Atlas of Cerebrovascular Disorders

Authored by 15 stroke specialists, this volume presents the aspects of stroke from testing to pathophysiology, to diagnosis and treatment options. The text includes chapters on vascular dementia, medical therapy, surgical therapy, stroke in younger patients, primary intracerebral haemorrhage and subarachnoid haemorrhage. This book should be of use to cardiologists, neurologists and general practitioners but is written to be accessible to medical students at the graduate level.
