

Facial exercises

A good understanding of your face means that as much as possible, you will be able to look the best you can at every age, because you will have understood what changes are likely to occur at every stage. Everyone needs to understand their face and all changes that are bound to occur over the course of time. While it is an open secret that we all age differently, the truth of the matter is that there are common facial changes that occur and which we can do a few things to counter positively. There are a number of internal and external factors that naturally affect your skin in general and your face in particular. Most of the internal factors are caused by a general decline of the skins natural substances such as elastin, collagen and hyaluronic acid, all of which are responsible for providing the skin with its volume and structure. On the other hand, the external factors that affect the skin are factors such as environmental pollution, stress, smoking and exposure to the sun. Your face can be divided into three horizontal sections that include the upper face consisting of the eyes, the eye brows and the forehead; the mid face consisting of the cheek, the nose and the under eye areas and finally the lower face consisting of the lips, the chin, the jaw line and the mouth area. While most people will concentrate on the outward changes that are visible on the surface like wrinkles, the truth of the matter is that those visible changes only represent many other changes that could be taking place internally. There are different internal changes that are represented by the outward telltale sings of aging that can be seen by all and sundry. The changes that cause skin aging normally begin from the level of the bone and spread all the way through the skins soft tissue as well as the muscles. This is why any interventions that we put in place will definitely need to include what is covered underneath the skin as well.

A dermatologist comments on a study exploring how a daily routine of facial exercises for 20 weeks could make some people look younger. - 10 min - Uploaded by FiftyPlusBeauty

FACIAL EXERCISES TO TONE THE FACE In another skincare video, I briefly mentioned that I A step-by-step guide to facial exercises that will alleviate those wrinkles in just 10 minutes a day!
