

# The Land at the Edge of the World - Greenland and Our Future

Greenland is perhaps the only land that was once a colony of a European power that by choice became an integral and semi-autonomous province within the colonizing power, the Kingdom of Denmark. It is now evolving toward independence. This book is a collection of 19th century eye-witness narratives of Greenland, - the land (Could any place be handsomer than Greenland?) and its people - that record the slowly evolving status of that colony toward independence in the 21st century. It is a unique record within the worlds political history. The narratives draw us as if by some unseen hand into a land of enchantment. Spencer Apollonio visited Greenland three times in the early 1950s when the political evolution of Greenland within Denmark was formalized by a visit by the Royal family. He lives in Boothbay Harbor, Maine.
